• Maybe some other stuff
python and the community have a bright future and vibrant community.
what is python?
“But the Python community has its own unique character. Python has a culture which finds an ideal balance between fast-moving innovation and diligent caution. It emphasizes readability, minimizes "magic," treats documentation as a first-class concern, and has a tradition of well-tested, backward-compatible releases in both the core language and its ecosystem of libraries. It blends approachability for beginners with maintainability for large projects...”

http://bit.ly/o73sOR
where is python?
(I don’t know)
oh wait...
... holy crap

(sorry if I forgot you)
everywhere.
python is amazing.
python: the language (today)
123 accepted peps
115 of which are in "Final" status (out of 284 total)
60 rejected, 21 withdrawn.

80 Built In Functions

How’s this for Batteries (3.x):

```bash
cd python-core/cpython/Doc/library
lst -l | grep .rst | wc -l
285
```

(hint: that’s almost all stdlib modules)
the future
we need...
but...
interpreters
predictions
PyPy, CPython, Jython and IronPython are BFFs.
community
get involved.
Locally:
Remotely:

http://pyladies.com/
http://pythonmentors.com/
http://pythonsprints.com/
http://pypy.org/
http://getpython3.com/
http://www.python.org/psf/
(... or find a module on pypi and port it to python 3, or just offer to help with that module!)
go outside.
don’t be a jerk.
in this together.
the future is bright indeed:

And it's up to all of us - our fate is our own.
thank you
